IRON CARB

Plough point

New technology

Push back the limits of wear thanks to Grégoire Besson's know-how and innovation!

Profile of the slippery support

Eases the soil flow to slide and therefore avoids sticking and wear on a specific spot of the mouldboard.

Point support

Forged and processed for a better resistance to abrasion.

Fastening bolt

Incorporated fastening bolt to avoid breaking related to the wear.

Aggressive angle of attack

Favours a better soil penetration.

Maximum protection

Wafer positionning and angle choice provide the maximum protection for all peripheral components.

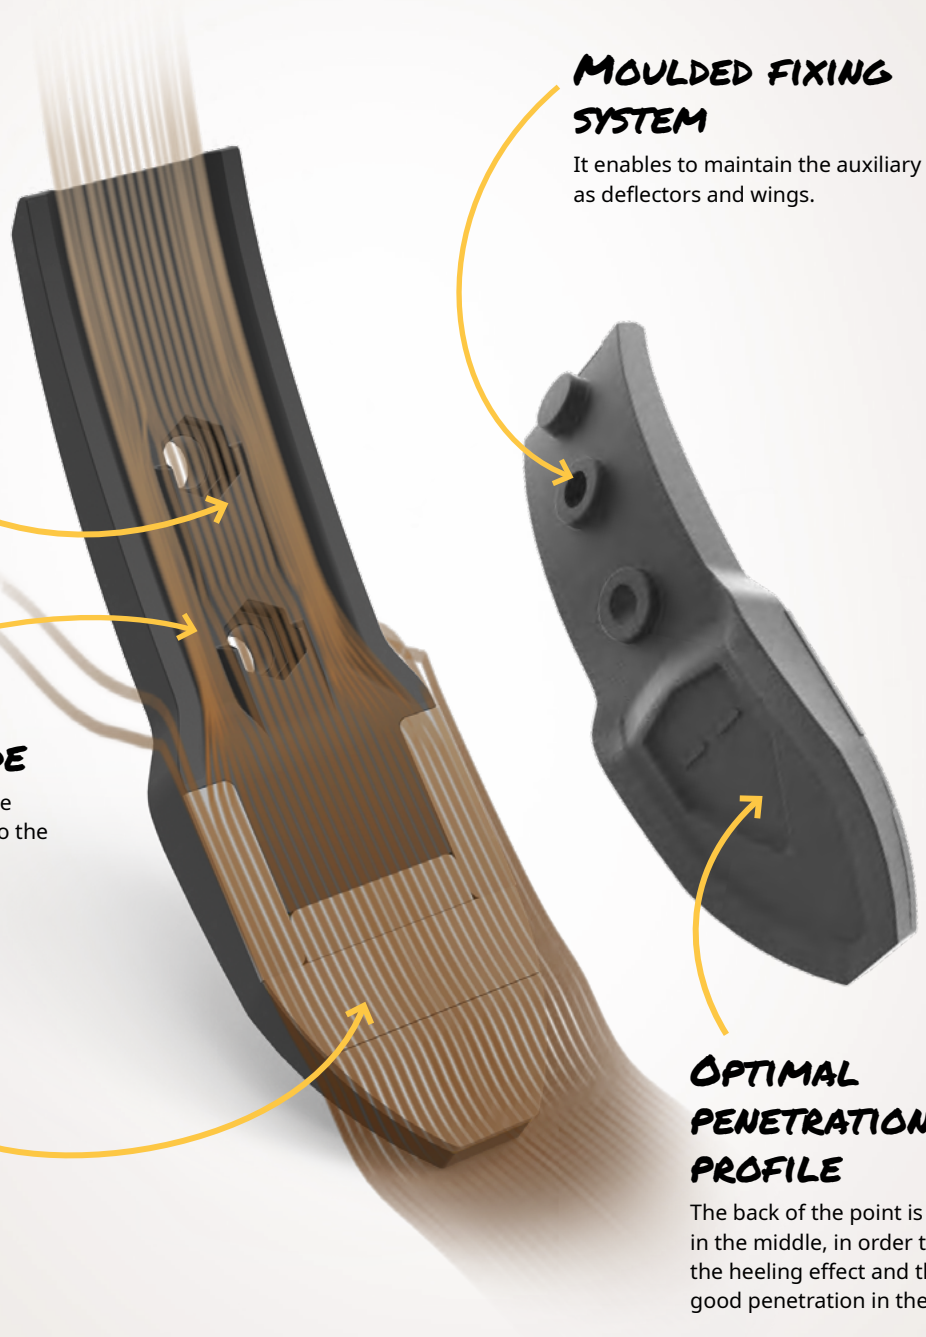
DART CARBIDE

New cutting-edge technology!

For stubble cultivation works between 10 and 30 cm deep.



Screw head protection

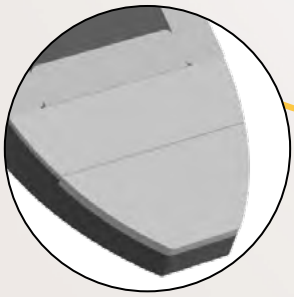
Hexagonal head screws are embedded in the point, so as to prevent them from rotation and facilitate the mounting and dismounting.

Moulded fixing system

It enables to maintain the auxiliary parts such as deflectors and wings.

Integrated slide

The reinforcements on each side allow a good flow of the earth to the deflector.



Carbide plate

3 levels of plates ensure a regular wearing for a maximum longevity.

Optimal penetration profile

The back of the point is hollowed out in the middle, in order to eliminate the heeling effect and thus to allow a good penetration in the soil.

DART range

New collection of wearing parts!

For stubble cultivation between 10 and 30 cm deep.

Points

The new DART range is made for your shallow or deep stubble ploughing work. Its design allows it to perfectly fit the tine while offering mixing solutions adapted to your requirements.

DART point forged 65 mm
Ref. : M340117

Many combinations possible!

Deflectors

To ensure a good mix, two types of deflectors are available. The double mix deflector allows the flow of soil to be directed towards the front of the tine, while the universal deflector divides the flow of soil to either side of the tine.
